

Devika Yanamala

Newcastle Upon Tyne, UK | devikayanamala55@gmail.com | [LinkedIn](#) | [Github](#)

Professional Summary

Results-driven Data Scientist with 2+ years of experience and an MSc in Data Science & AI. Expertise in predictive modeling, deep learning, and building automated ML pipelines (AWS). Dedicated to solving complex business problems through scalable algorithms and translating datasets into highly accurate forecasting and operational strategies.

Technical Skills

- **Programming & Databases:** Python, SQL, R, Snowflake, Linux/Unix
- **Machine Learning & AI:** Predictive Modeling, Deep Learning, NLP, Computer Vision, Generative AI
- **Frameworks & Libraries:** Scikit-Learn, TensorFlow, PyTorch, Pandas, NumPy, Keras, XGBoost
- **Cloud, MLOps & Analytics:** AWS (SageMaker, EC2, S3), Git, CI/CD, Flask, Statistical Analysis, Power BI

Professional Experience

Data Analyst – Product Analytics

Rooted Platform

04/2026 – Present

Self Employed

- Developed an MVP website to enable discovery of culturally authentic food products using location-based filtering and user preferences
- Designed core features including product search, authenticity-based ratings, and location-based store recommendations
- Analysing simulated user behaviour data (search queries, pricing, and location filters) to identify patterns influencing user decisions
- Performing exploratory data analysis using **Python and SQL** to evaluate cuisine popularity, price sensitivity, and store proximity trends
- Developing data-driven improvements such as personalised search and enhanced product recommendations

Data Analyst

Newcastle University, UK

01/2026 – Present

Studentship

- Conducted advanced data analysis using SQL and Python to identify usage patterns across smartcard and occupancy datasets, directly supporting strategic resource allocation decisions.
- Designed and deployed interactive Power BI dashboards, translating complex backend datasets into clear, operational insights for non-technical stakeholders.
- Collaborated cross-functionally with library management teams to establish structured data governance practices, improving overall data accessibility.

Associate Data Scientist

BEPEC Solutions

05/2023 – 05/2025

Bangalore, India

- Developed scalable predictive models and automated machine learning workflows using Python and AWS, significantly enhancing data processing efficiency and decision reliability.
- Led end-to-end data science projects, partnering directly with stakeholders to align algorithmic deliverables with core business requirements and revenue goals.
- Automated manual data pipelines, improving overall reporting efficiency by 30% and saving 10+ hours per week.

Data Scientist Intern

BEPEC Solutions

01/2023 – 05/2023

Bangalore, India

- Assisted in the training, tuning, and validation of predictive models, contributing to a 15% improvement in forecasting accuracy for client projects.
- Performed exploratory data analysis (EDA) and feature engineering to uncover hidden market trends and support data-driven decisions.
- Created compelling visual reports to present complex algorithmic findings to senior management.

Key Projects

Next Best Action & Customer Churn Prediction Engine (Banking) | Python, XGBoost, SHAP

[\[Projectlink\]](#)

- Developed an end-to-end classification pipeline using Python to predict customer churn, achieving high ROC-AUC performance on real-world, imbalanced datasets.
- Engineered an automated XGBoost model utilizing GridSearchCV for hyperparameter optimization, mitigating extreme class imbalance by embedding SMOTE within a strict cross-validation pipeline.
- Implemented Explainable AI using SHAP values to interpret complex model decisions and identify key churn drivers, ensuring alignment with UK financial regulatory transparency standards.
- Designed a dynamic Next Best Action (NBA) recommendation engine that mapped high-risk customer personas to optimized retention products, bridging predictive analytics with commercial revenue uplift.

Education

Master of Science (MSc), Data Science & Artificial Intelligence

Newcastle University

Expected 09/2026

Newcastle upon Tyne, UK

- **UK Modules:** Data Visualisation, Machine Learning, Statistical Foundations of Data Science, Deep Learning, Image Processing, Data Science in the wild(Group Project), Generative Ai for Businesses, Advanced AI

Bachelor of Technology

IIIT, RGUKT

2019 – 2023

RK Valley, India (CGPA: 8.7/10)

Certifications & Achievements

UK Work Culture Programme (Awarded Participant)

Newcastle University

- Awarded a highly competitive place in an intensive 2-day professional programme focused on UK industry standards and corporate communication.
- Collaborated within a cross-functional team to solve a live business challenge set by a UK employer, presenting actionable findings and project solutions directly to stakeholders.
- Networked with international alumni and industry professionals to align technical skills with the current demands of the UK job market.
